

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION 5
77 WEST JACKSON BOULEVARD
CHICAGO, IL 60604-3590

December 30, 2014

MEMORANDUM

SUBJECT: Bendix Autolite Corp – OHD066046228: Data Quality Concerns with 2011 Supplemental Expanded Site Inspection

FROM: Erica Aultz, Site Assessment Manager *Erica Aultz*
Superfund Division

THRU: Patrick Hamblin, NPL Coordinator *Pat Hamblin*
Superfund Division

TO: File

As the result of an audit, EPA has reason to question a subset of analytical laboratory results for the Supplemental Expanded Site Inspection of the Bendix Autolite Corp site located in Fostoria, Seneca County, Ohio. The data of unknown quality was collected in September 2010 as part of the Phase II sampling event for the site.

EPA has notified Ohio EPA and recommended OhioEPA notify any parties who received this information to its unknown quality.

In 2015, OhioEPA will resample the Phase II investigation area and create an addendum to the 2011 Supplemental Expanded Site Inspection report.

REMEDIAL SITE ASSESSMENT DECISION – EPA Region 05

Site Name: BENDIX AUTOLITE CORP

Alias(es):

City: FOSTORIA

County or Parish: SENECA

State: OH

Refer to Report Dated: 08/18/2011

EPA ID: OHD066046228

Report Developed By: STATE

State ID:

Report Type: EXPANDED SITE INSPECTION #002

- | |
|--|
| <ul style="list-style-type: none"><input checked="" type="checkbox"/> 1. Further Remedial Site Assessment Under CERCLA (Superfund) is not required because:
NFRAP-Site does not qualify for the NPL based on existing information<input type="checkbox"/> 2. Further Assessment Needed Under CERCLA.<input type="checkbox"/> 3. Remedial study/cleanup needed. |
|--|

Decision/Rationale:

The U.S. Environmental Protection Agency (EPA) has determined that no further remedial action by the Federal Superfund program is warranted at the referenced site, at this time. The basis for the no further remedial action planned (NFRAP) determination is provided in the attached document. A NFRAP designation means that no additional remedial steps under the Federal Superfund program will be taken at the site unless new information warranting further Superfund consideration or conditions not previously known to EPA regarding the site are disclosed. In accordance with EPA's decision regarding the tracking of NFRAP sites, the referenced site may be removed from the CERCLIS database and placed in a separate archival database as a historical record if no further Superfund interest is warranted. Archived sites may be returned to the CERCLIS site inventory if new information necessitating further Superfund consideration is discovered.

Decision/Rationale (Continued):

1.0 EXECUTIVE SUMMARY

The Ohio Environmental Protection Agency (OEPA) Division of Emergency and Remedial Response (DERR) entered into a cooperative agreement with the United States Environmental protection Agency (U.S. EPA) Region V to conduct an Addended Supplemental Expanded Site Inspection (ASESI) of the Bendix Autolite Corporation (BAC) site located in Fostoria, Seneca County, Ohio. The purpose of this report is to present analytical data and determine if an ongoing release is occurring at the site.

The field sampling occurred in two phases. Phase I sampling occurred on October 14-15, 2008 and consisted of 24 ground water samples from around the northern Fostoria area. These samples included active residential wells used as a primary water source, former residential wells, monitoring wells and production wells. Additionally, Ohio EPA collected two sediment/soil samples from an unnamed ditch that receives drainage from the site.

The Phase II sampling occurred on September 27-28, 2010 and consisted of 20 additional residential well, monitoring well, and production well samples. All the samples were submitted to the U.S. EPA Contract Laboratory Program (CLP). The samples were analyzed through for volatile organic compounds (VOCs) and Target Analyte List (TAL) metals.

Sample results indicated significant levels of chlorinated solvents, primarily trichloroethylene (TCE), in the production wells and one monitoring well. One active residential sample had both TCE and tetrachloroethene (PCE) detected below the Maximum Contaminant Limit (MCL). Several of the former residential wells not used as a primary water source also had significant levels of TCE. TCE was detected in one well at 6.2 parts per billion (ppb), above the MCL of 5.0 ppb.

2.0 SITE BACKGROUND

2.1 Site Description

BAC is an active spark plug manufacturing plant located within the city limits of Fostoria at 1600 North Union Street, Fostoria, Seneca County, Ohio 44830. See **Figure 1** for the Site Location Map, and **Figure 2** for the site located on a high-resolution aerial photograph. The BAC facility is currently owned by Honeywell International Inc. and is 55 acres in size.

The site is located in a mixed residential, industrial and commercial area in northern Fostoria. Union Street borders the site to the west and Jones Road to the north, both primarily residential. Main Street borders the site to the east and is primarily industrial. A quarry pond borders the site to the south, and the abandoned Chesapeake & Ohio Railroad line and the active Roppe Rubber facility are adjacent to the site to the southwest.

The office/manufacturing facility is located near the center of the site. There are several paved parking areas, and the remainder of the site is grass. The site is fenced and access is controlled and monitored by a gate and guard station in the east side.

There are two production and numerous monitoring wells on-site. Production well B-1 is a ground water remediation well that pumps at an average rate of 70 gallons per minute (GPM). The extracted ground water discharges directly into the City of Fostoria sanitary sewer system. Production well B-2 is a cooling water supply well for the manufacturing operations. In addition to the production wells, there are numerous monitoring wells on-site.

2.2 Site History

In May of 1984, BAC reported high levels of TCE detected in two process water wells on-site. The company and Seneca County Department of Public Health (SCDPH) initiated further sampling, which included five nearby residential wells. Although initial sampling of the residential wells did not indicate off-site migration, further sampling later that same year detected chlorinated solvents in several residential wells.

In October 1984, BAC contracted with T.A. Gleason and Associates, a Cincinnati based environmental consulting firm, to conduct a comprehensive ground water assessment on the site and surrounding area. As part of the investigation, 85 commercial and residential wells located around the area were sampled.

VOCs were detected in 18 of the 78 residential wells that were sampled with concentrations ranging from 1 to 52 ppb. The highest concentration of VOCs was detected in the well located at 1712 Walnut Street. In this well, TCE was detected at 23.5 ppb. The site well at Fostoria Industries had TCE detected at

20,500 ppb, as well as other VOCs. SCDPH issued a health advisory, and the homes were provided with bottled water.

In January of 1985, the Ohio EPA sent a questionnaire to 23 industries and small businesses in the Fostoria area concerning their past and present solvent usage and operating practices. From ground water samples and the questionnaire, other potential sources in the northern Fostoria area were identified. They include BAC, Fostoria Industries, Roppe Rubber, Chrysler Foundry, Norton Manufacturing, National Electric Carbon Corp. (AKA Union Carbide), a former dry cleaner, and a quarry.

April 1986, most all residences in the affected areas were connected to city water. However, there are several nearby residential wells currently used as a primary water source. These are located north of Fostoria Industries and BAC. Many of the former residential wells still exist and are usable for washing cars and watering lawns.

BAC identified the TCE source areas as being two former vapor de-greasers and a former TCE storage area. These source areas are located inside the main BAC production facility building.

In January 1994, a benzene spill occurred on the BAC site. Based on recovered material, the company estimated the release was 625 gallons. Recovered material included approximately 40 gallons from a sanitary sewer line catch basin.

BAC sampled the on-site monitoring wells annually by between July 1985 and December 2001. Lab results reported benzene, TCE and/or its breakdown byproducts above the MCL. Analytical results from Well B-1 from 2001 show TCE at 3,800 ug/L and cis-1,2-Dichloroethene at a concentration of 140 ug/L

2.3 Site Geology and Hydrogeology

IEP Environmental reported results of the on-site drilling in their 1991 report. Five to ten feet of glacial overburden was encountered. This overburden consists of brown soil with scattered black gravel grading into a brown to grey silty clay. Fill material was found at drilling locations near the buildings and was predominately brick, concrete and sand.

The bedrock is a tan to gray Lockport Formation dolomite. This consists of fine-grained carbonate with numerous, small solution cavities. There is also some secondary calcite and quartz mineralization. On the Fostoria Industries site, the upper 5 to 10 feet of the dolomite was severely weathered and a white/buff color. This layer contains the upper aquifer. The dolomite was moderately weathered from 15 to 30 feet below ground surface, and only slightly from 30-40 feet. Some fracturing and rust staining was present within the 100-foot interval

indicating that they are water-bearing fractures.

The estimated yield for the deep wells is 50 to 100 GPM. The shallow wells in the upper weathered dolomite have an estimated yield of 15-20 GPM. These estimates were based on well development observations and well evacuation during sampling.

From the ground water elevations, the shallow ground water flow is to the northwest. The hydraulic gradient is 0.0024. Although there are only two deep wells, it appears that the flow of the deeper zone is also to the northwest. The deep wells appear to be hydraulically connected with the shallow zone, and a net ground water discharge from the shallow zone to the deeper zone exists.

3.0 SAMPLE LOCATIONS & DISCUSSION OF RESULTS

During the Phase I inspection conducted by the Ohio EPA on October 14-15, 2008, twenty-three samples were collected. The samples included the following:

- Five active residential wells, plus one duplicate. Active residential wells are used as primary water source. One of these wells was used as a background sample
- Ten former residential wells, plus one duplicate. Former residential wells exist but are not used for drinking water or the primary water source
- Three production wells located on the Roppe Rubber facility
- One soil/sediment sample, plus one duplicate, collected from unnamed ditch that receives drainage from the site
- One Roppe Rubber monitoring well that was used as a background sample

During the Phase II inspection conducted by the Ohio EPA on September 27-28, 2010, twenty-one additional samples were collected. The samples included the following:

- Ten active residential wells, plus one duplicate
- Three former residential wells, plus one duplicate
- Four on-site monitoring wells
- Two on-site production wells

Standard Quality Assurance and Quality Control (QA/QC) procedures for Site Inspection field activities were followed during the investigation. These procedures, including sample collection, packaging and shipping, and equipment decontamination, are documented in the Quality Assurance Project Plan (QAPP) for Region 5 Superfund Site Inspection activities for Ohio EPA and Ohio EPA Field Standard Operating Procedures.

U.S. EPA Contract Laboratory Program (CLP) analyzed the samples. Analysis included the VOCs and Target Analyte List (TAL) metals.

The organic sample results are reported in the units of either micrograms per liter (ug/L) or micrograms per kilogram (ug/Kg) which is equivalent to parts per billion (ppb). The inorganic sample results are reported in milligrams per liter (mg/L) or

milligrams per kilogram (mg/Kg) which is equivalent to parts per million (ppm). U.S. EPA Region 5 reviewed the CLP data for compliance with the Contract Laboratory Program, and validated the data using the Computer-Aided Data Review and Evaluation (CADRE) software package.

The CLP data package is presented in **Appendix B**. Significant findings based on these data are summarized in **Tables 2 through 5**. Under the Hazard Ranking System Rule, results are considered significant if they are at least three times the background sample result and above the Contract Required Quantitation Limit (CRQL). The CRQLs can be found in **Appendix C**. A photographic log of the sample events can be found in **Appendix D**.

3.1 Residential Well Samples

Twenty-eight residential wells were sampled over both the Phase I and Phase II sample events. Fifteen wells were considered active (currently being used as primary water supply) and thirteen wells were former (not being used as primary water supply).

Depths for many of the residential wells could not be established. A number of well logs on file at the Ohio Department of Natural Resources (ODNR) for the area do not have specific addresses and could not be correlated to the wells sampled. The well locations and well depths, if known, are listed in **Table 1** along with their corresponding CLP number and Sample Identification number.

The residential wells were purged for ten to fifteen minutes before sampling. The samples were collected from a location that by-passed the water softener or other water treatment system. An outside spigot was most often used. Three of the former wells sample numbers GW-9/GW-10, GW-11, GW-12 did not have a usable submerged pump and were sampled using Ohio EPA's peristaltic pump.

The sample locations can be found on the Residential Well Sample Location Map, **Figure 3**. Significant results for the active residential wells can be found in **Table 2**.

J= the value is estimated

Of the fifteen active wells, five (plus one duplicate) had significant results. The sample collected from 1730 N Union Street had detections of both TCE and PCE below the MCL. All but one were elevated in copper, lead, manganese, and/or zinc. One well sampled on September 28, 2010 had elevated levels of 2-hexanone, a common lab contaminant.

Significant sample results for the former residential wells can be found in Table 2 below.

J= the value is estimated; Bold = value above the MCL of 5.0 ug/L

Of the thirteen former wells, eight (plus one duplicate) had significant results. Chlorinated hydrocarbons were detected in four wells, including TCE detected in

two wells with results above the MCL in one well and it's duplicate. PCE was detected in two wells, and vinyl chloride in one well. These homes are connected to the municipal water supply. The former residential wells are sometimes used to water lawns and wash cars.

3.2 Monitoring and production Well Samples

Ten monitoring and production wells were sampled over both the Phase I and Phase II sample events. Three production wells on the Roppe Rubber facility and one monitoring well belonging to Roppe Rubber were sampled during the 2008 sample event. The sample locations can be found on the Production and Monitoring Well Sample Location Map, **Figure 4**.

The production wells were turned on and purged prior to sampling. The samples GW-13 and GW-15 were collected using a peristaltic pump. Sample GW-14 was sampled with a bailer. Depths of the wells could not be measured due to pumps and electrical wiring in the well. The Roppe Rubber monitoring well, sample number GW-16 was purged about 20 minutes with a DC purge pump, then sampled using a bailer.

In 2010, four monitoring wells and two production wells located on the BAC property were sampled. The production wells were running and the sample was collected from the tap on the wells. The monitoring wells were sampled using low flow sampling techniques and a bladder pump. Two of the monitoring wells have been partially abandoned and partially filled with grout. MW-2 had 20 feet of water before grout was encountered. MW-7 had about 6 feet of water. Both these wells were sampled.

Significant sample results for monitoring and production wells can be found in **Table 3**.

m,p-Xylene	0.54		21 J	
				11 J

Numerous chlorinated hydrocarbons were detected on both the Roppe Rubber and BAC sites. The BAC production wells contained the highest levels, including TCE detected at 960 ppb and vinyl chloride detected at 2.4 ppb in production well B-1. This production well is used for pump and treat remediation. The Roppe

Rubber wells contained TCE detected at 53 ppb and PCE detected at 6.0 ppb. Low levels of the BTEX compounds were also detected in the Bendix production wells.

3.3 Soil/Sediment Samples

One soil/sediment sample and the duplicate was collected in the unnamed ditch north of the site. This ditch appears to receive drainage from the BAC site. This ditch was dry during the sampling except for a small, mostly stagnate, pool of water.

These samples were collected as screening samples to see if chlorinated hydrocarbons were present. No background sample was collected as there was no true upstream location available. Sample result detections were compared to the CRQLs.

No chlorinated hydrocarbons were detected in the soil/sediment sample. Three volatile organic compounds were detected, all common lab contaminants. Acetone was detected at 85 ppb, methyl acetate at 27 ppb and methylene chloride at 7.9 ppb.

4.0 MIGRATION PATHWAYS

4.1 Soil Exposure Pathway

The BAC site is located in an industrial and residential area of Fostoria. Buildings and asphalt parking areas cover approximately half of the site. The other half is grass. A maintained fence and guard control site access.

There are about 320 employees on-site. It is unknown if the on-site source areas were removed or have restricted access, therefor there may be a potential for on-site workers to come into direct contact with contaminants. There are no resident individuals, which are defined by HRS rule as a person who lives or attends school on and within 200 feet an area of contamination. The nearby population within one mile is 3,112. Census information can be found in **Appendix E**.

4.2 Ground Water Pathway

The ground water pathway is the main pathway of concern. There is known ground water contamination in the Fostoria area. Although the homes that were initially affected have been connected to the municipal water supply, there are several residential homes outside the city limits to the north and west that utilize ground water wells as their primary water source.

The city of Fostoria obtains their drinking water mostly from surface water sources. However, there are three ground water wells that are used as a stand-by water source. These wells are located in a wellhead protection area on the west side of the city near the drinking water reservoirs and have not been used for the past eight years, and thus were not sampled for this investigation.

There are two other community ground water systems with in a four-mile radius of the site. The Fostoria Mobile Home Estates is located 1.73 miles to the north and serves 195 people. The Pelton Mobile Home Park is located 2.6 miles from the site and serves 225 people.

These systems were not sampled during this investigation due to their distance from the source. Maps and data tables for this information can be found in **Appendix E**.

Chlorinated hydrocarbons were detected in four former residential wells, including TCE detected in two wells with results above the MCL in one well. PCE and vinyl chloride were also detected. Many chlorinated compounds were detected in the production wells on-site, including TCE as high as 960 ppb.

Because there are several known sources of chlorinated solvents in the immediate area, attribution to one particular source cannot be determined.

4.3 Surface Water Pathway

Most of the runoff from the BAC site is captured by the city of Fostoria combined sanitary and storm water sewer system and conveyed to the Fostoria City Waste Water Treatment Plant.

The surface water intakes for the city of Fostoria are located in two reservoirs (upstream from the wastewater plant) on the west side of the city. The population served is about 15,000 people. Maps and data tables for this information can be found in **Appendix E**.

4.4 Air Pathway

The Fostoria Industries site is an active manufacturing facility. Most of the land is covered with buildings or asphalt parking areas. There are some grassy areas that are maintained. The possibility of contaminants migrating as gas or particulates is low.

The estimated population according to the 2000 census is as follows:

Radius	Population
0 - 1/4	239
1/4 - ½	482
½ - 1	2,390
1-2	6,753
2-3	4,634
3-4	2,629
Total	17,127

4.0 SUMMARY

There has been documented ground water contamination around the northern Fostoria area and under the BAC site since 1984. From the sample results of this investigation, it appears BAC is a continuing and contributing source of TCE to the surrounding aquifer.

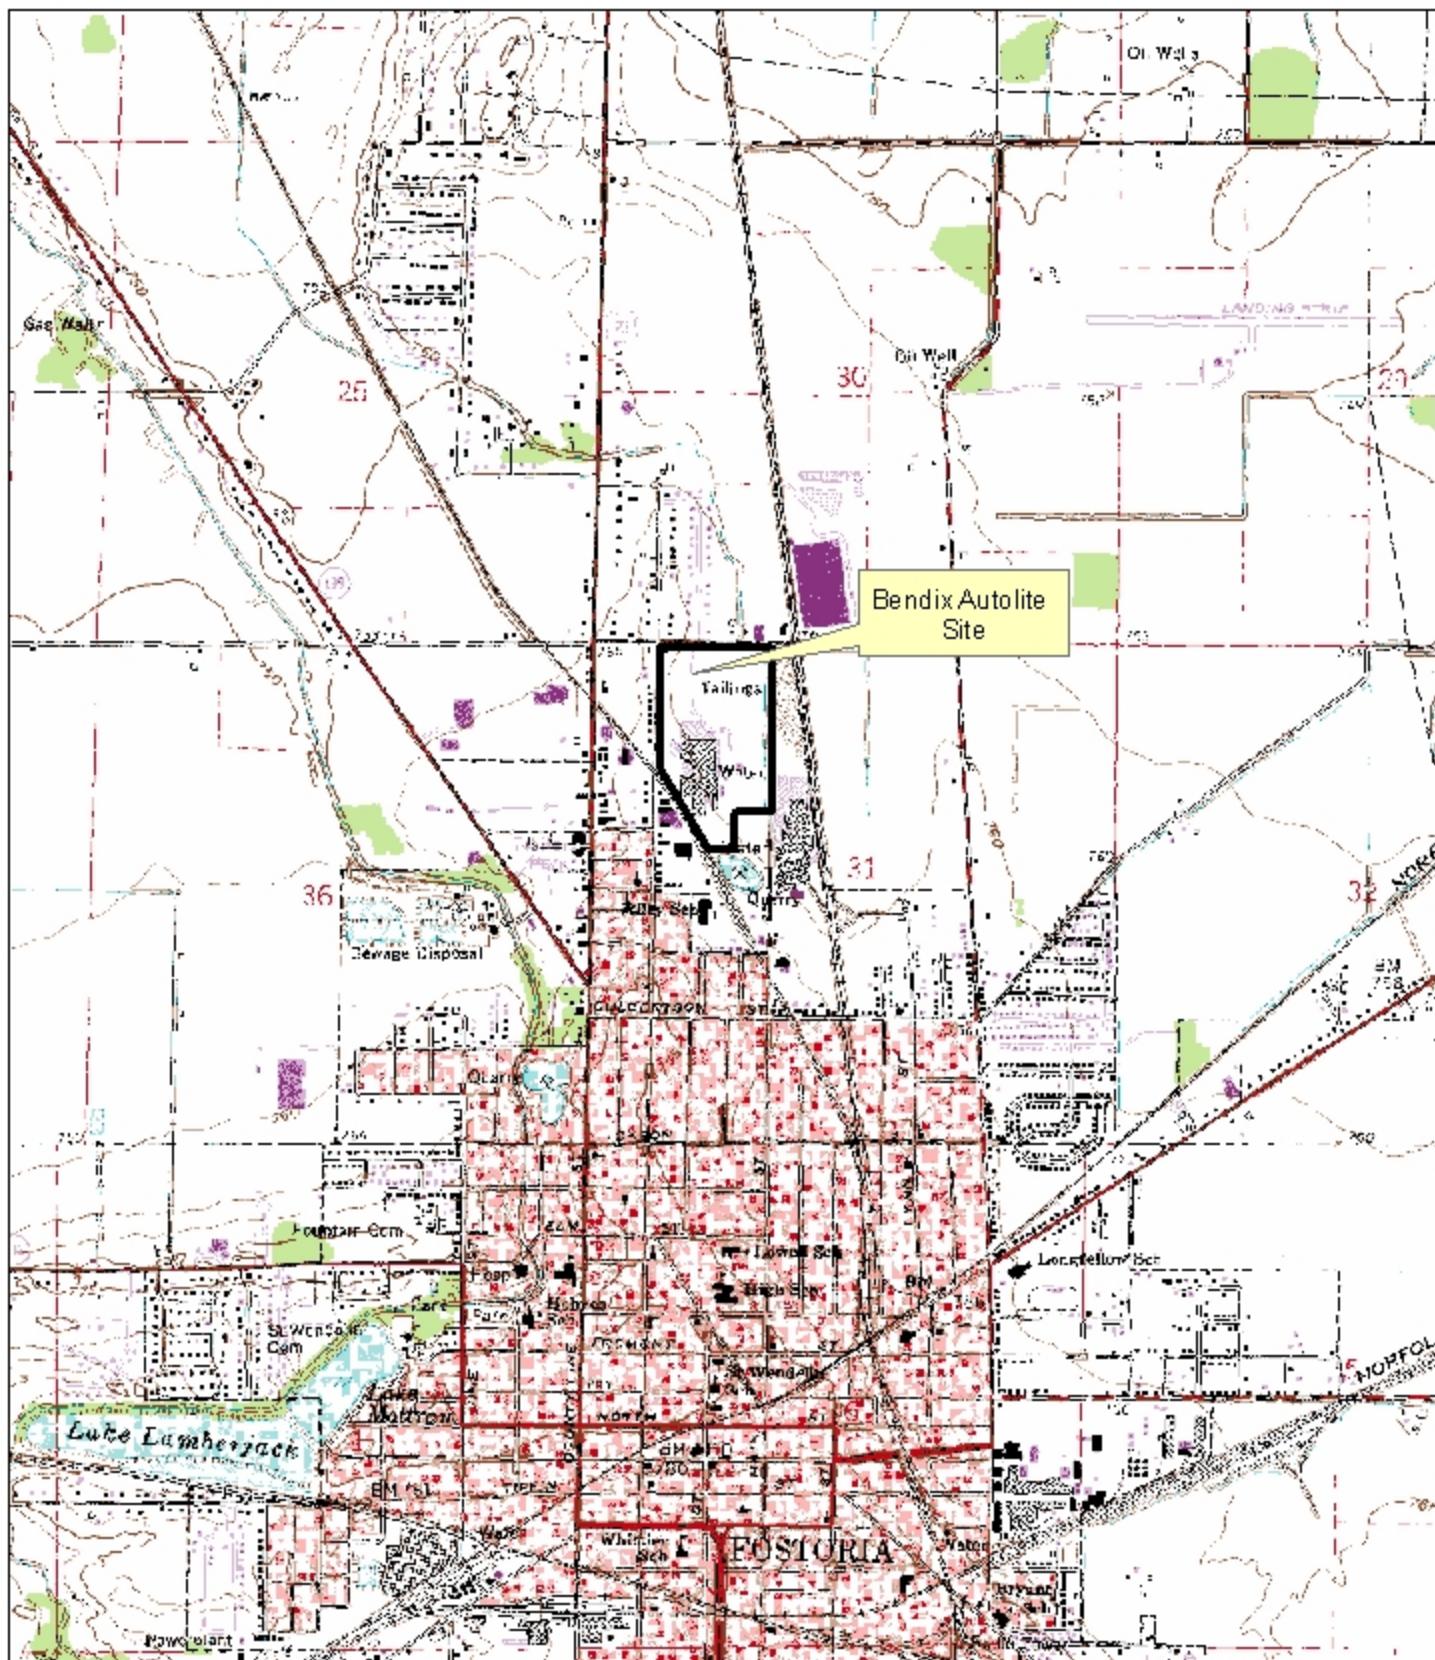

Although source samples were not collected during the investigations, there are three source areas known on the BAC site. The production well on site used for pump and treat remediation had concentrations of TCE detected at 960 ppb. There is also a known spill of Benzene that occurred on site in the past.

Although most homes in the immediate area are connected to city water sources, there are still targets outside of the city limits. One home located at 1730 North Union Street had TCE and PCE detections.

However, because there are several known sources of chlorinated solvents in the immediate area, this investigation could not attribute chlorinated solvents to one particular source.

Appendix D

Photographic Log

Bendix Autolite S.E.S.I. -- Photos from Oct. 14-15, 2008 sampling; Groundwater sample GW-1; Former Residential Well at 1712 N. Walnut St. (R-7); Looking southwesterly; Wellhead is located in a crawlspace near front door & under sidewalk.

Bendix Autolite S.E.S.I. -- Photos from Oct. 14-15, 2008 sampling; Groundwater sample GW-2; Former Residential Well at 1721 N. Walnut St. (R-20); Looking westerly from back yard; Wellhead is located in grass near steps, in bottom right corner of photo.

Bendix Autolite S.E.S.I. -- Photos from Oct. 14-15, 2008 sampling; Ground water sample GW-3; Former Residential Well at 1728 N. Walnut St. (R-14); Looking northwesterly in front yard; Wellhead is located in front yard near green bucket in right center of photo.

Bendix Autolite S.E.S.I. -- Photos from Oct. 14-15, 2008 sampling; Groundwater sample GW-4; Residential Well at 1709 N. Walnut St. (R-250); Looking southwesterly; Wellhead is located in crawlspace under house in back of garage.

Bendix Autolite S.E.S.I. -- Photos from Oct. 14-15, 2008 sampling; Groundwater sample GW-5; Former Residential Well at 1704 N. Walnut St. (R-3); Looking westerly; Wellhead is located in grass in center of photo, to left of front sidewalk & front door.

Bendix Autolite S.E.S.I. -- Photos from Oct. 14-15 2008 sampling; Groundwater sample GW-9 and its duplicate, GW-10; Former Residential Well at 1525 N. Union St. (R-58); Looking southerly; Wellhead is located in right center of photo in landscaped area, near sampler.

Bendix Autolite S.E.S.I. -- Photos from Oct. 14-15 2008 sampling; Groundwater sample GW-11; Former Residential Well at 1641 N. Union St. (R-56); Looking westerly; Wellhead is located in center of photo to left of back door.

Bendix Autolite S.E.S.I. -- Photos from Oct. 14-15 2008 sampling; Groundwater sample GW-12; Former Residential Well at 1521 N. Countyline St. (C-6); Looking north-westerly; Wellhead is located inside of door in building on left, near sampler.

Bendix Autolite S.E.S.I. -- Photos from Oct. 14-15 2008 sampling; Groundwater sample GW-18; Former Residential Well at 1703 N. Union St. (R-50).

Bendix Autolite S.E.S.I. -- Photos from Oct. 14-15 2008 sampling; Groundwater sample GW-17; Former Residential Well at 1730 N. Union St. (R-33).

Bendix Autolite S.E.S.I. -- Photos from Oct. 14-15 2008 sampling; Groundwater sample GW-19 and its duplicate, GW-20; Residential Well at 418 W. Jones Rd.; Looking southerly; Wellhead is located in bottom center of photo, slightly-obscured by flowers above the sign.

Bendix Autolite S.E.S.I. -- Photos from Oct. 14-15 2008 sampling; Groundwater sample GW-21; Residential Well at 4015 N. U. S. Highway 23 (R-62).

Bendix Autolite S.E.S.I. -- Photos from Oct. 14-15 2008 sampling; Groundwater sample GW-13 from Roppe Rubber Production Well #6; 1602 N. Union St.; Looking westerly; N. Union St. Is across the middle of the photo.

Bendix Autolite S.E.S.I. -- Photos from Oct. 14-15 2008 sampling; Groundwater sample GW-14 from Roppe Rubber Production Well #4; 1602 N. Union St.; Looking easterly.

Bendix Autolite S.E.S.I. -- Photos from Oct. 14-15 2008 sampling; Groundwater sample GW-15 from Roppe Rubber Production Well #5; 1602 N. Union St.; Looking easterly.

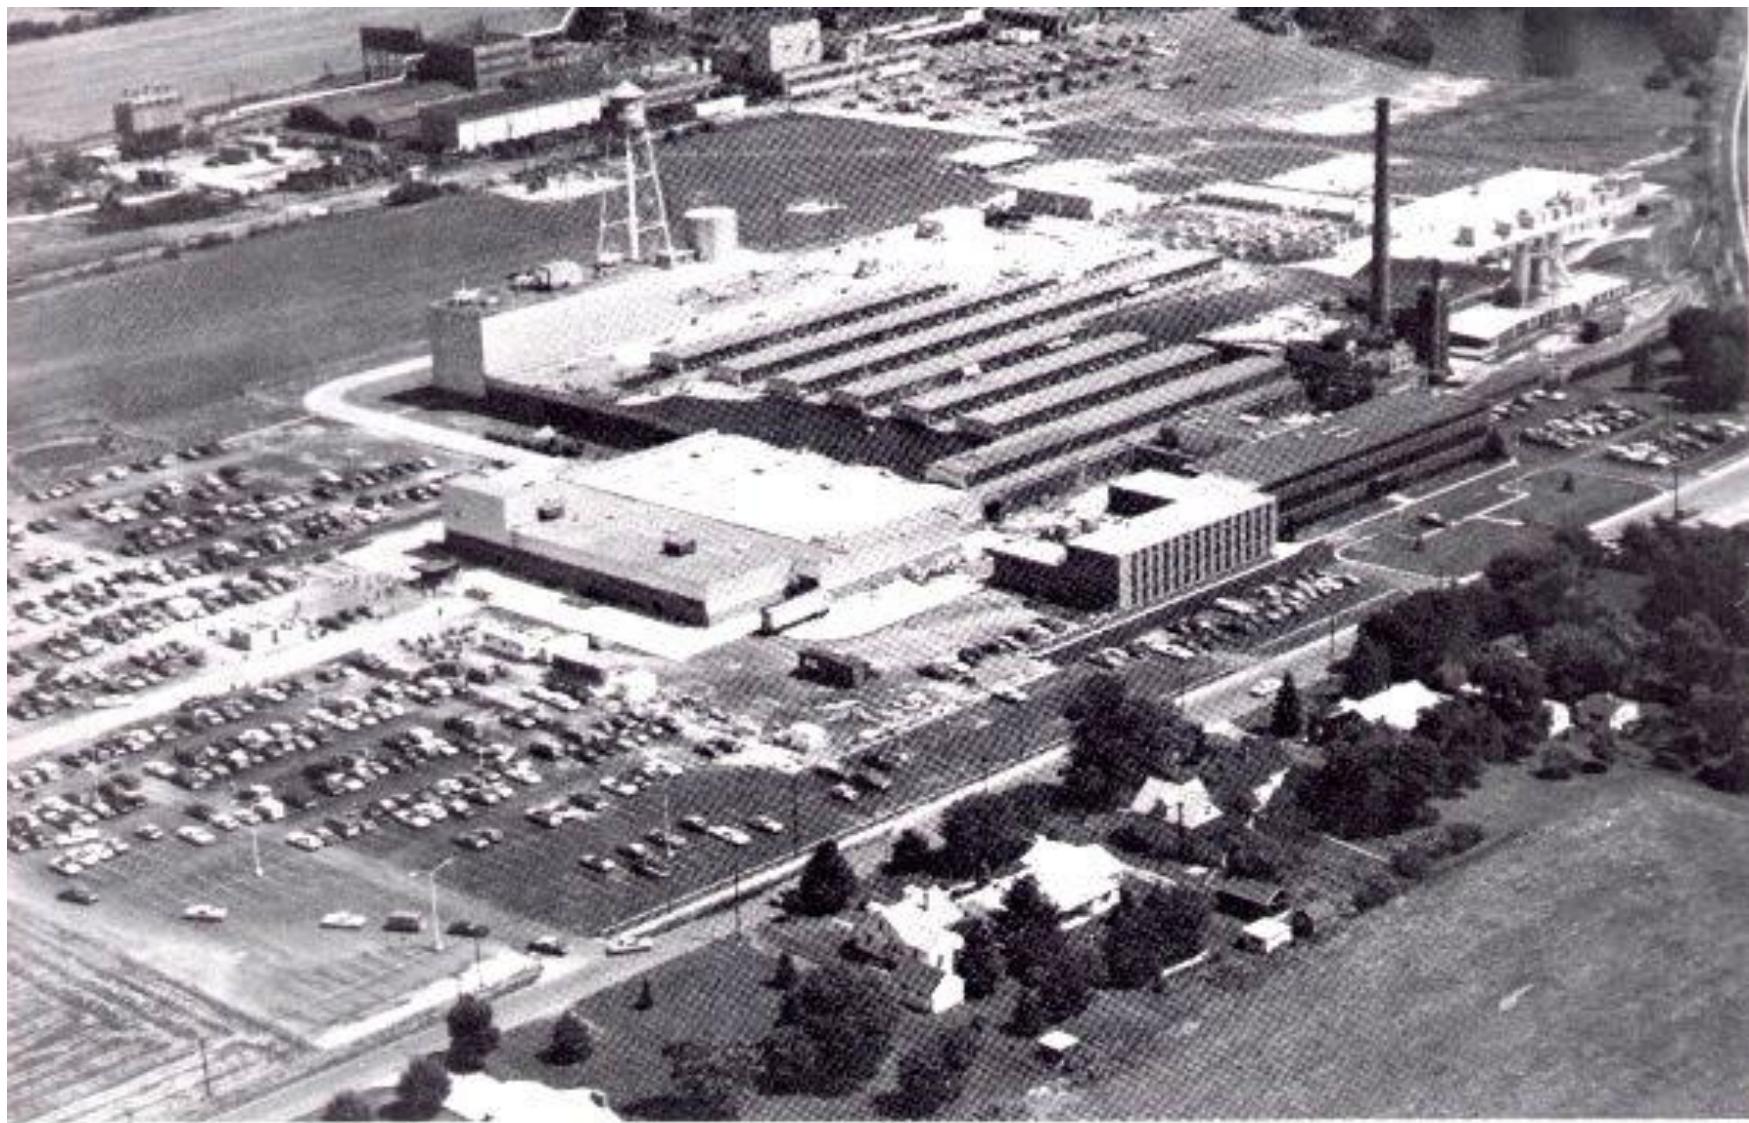

Bendix Autolite S.E.S.I. -- Photos from Oct. 14-15 2008 sampling; Background Groundwater sample GW-16 from Roppe Rubber Monitoring Well #7; 1602 N. Union St.; Looking westerly.

NOTE: No photos were taken of GW-6, GW-7 & GW-8. GW-22 was the VOC Trip Blank.

Bendix Autolite S.E.S.I. -- Photos from Oct. 14-15 2008 sampling; Sediment samples SE-1 and its duplicate, SE-2; Unnamed stream/ditch between 180 Jones Road and Norton Manufacturing; Grey culvert continues left under Jones Rd.; Looking westerly; Downstream is to the right.

*Bendix Autolite Corporation, Spark Plug
Division, Fostoria—New Engineering Wing—1975*

Aerial photograph of site when owned by Bendix Autolite in 1975. North Union Street extends from the bottom left corner towards the middle of the right side of the photo. Looking southeasterly. Photo source was a Fostoria Community Web Site, <http://www.fostoria.org/history/autolite/Autolite3.html#bendix>.

Natural Heritage Data

ID	STATUS	DISTANCE	SCIENTIFIC NAME	COMMON NAME
1	State Endangered	4.6507	LANIUS LUDOVICIANUS	LOGGERHEAD SHRIKE
2	State Threatened	7.2845	CAREX CRUS-CORVI	RAVEN-FOOT SEDGE
3	State Threatened	7.7468	HEDEOMA HISPIDA	ROUGH PENNYROYAL
4	State Threatened	7.7559	CELTIS TENUIFOLIA	DWARF HACKBERRY
5	State Threatened	8.4733	BARTRAMIA LONGICAUDA	UPLAND SANDPIPER
6	State Endangered	9.3134	CAREX ALOPECOIDEA	NORTHERN FOX SEDGE
7	State Threatened	9.7768	HEDEOMA HISPIDA	ROUGH PENNYROYAL
8	State Threatened	10.0981	CONYZA RAMOSISSIMA	BUSHY HORSEWEED
9	State Threatened	12.0091	CLEMMYS GUTTATA	SPOTTED TURTLE
10	State Threatened	12.1072	BETULA PUMILA	SWAMP BIRCH
11	State Threatened	12.1410	CLEMMYS GUTTATA	SPOTTED TURTLE
12	State Endangered	12.3013	FUNDULUS DIAPHANUS MENONA	WESTERN BANDED KILLIFISH
13	State Threatened	12.3187	CELTIS TENUIFOLIA	DWARF HACKBERRY
14	State Threatened	12.3247	IXOBRYCHUS EXILIS	LEAST BITTERN
15	State Endangered	12.3247	ELEOCHARIS PAUCIFLORA	FEW-FLOWERED SPIKE-RUSH
16	State Endangered	12.3247	POTAMOGETON GRAMINEUS	GRASS-LIKE PONDWEED
17	State Endangered	12.4315	CYPripedium candidum	WHITE LADY'S-SLIPPER
18	State Threatened	12.4567	ARABIS HIRSUTA VAR ADPRESSIPILIS	SOUTHERN HAIRY ROCK CRESS
19	State Threatened	12.4567	CELTIS TENUIFOLIA	DWARF HACKBERRY
20	State Threatened	12.4567	ANEMONE CYLINDRICA	PRairie THIMBLEWEED
21	State Threatened	12.6199	BARTRAMIA LONGICAUDA	UPLAND SANDPIPER
22	State Endangered	12.8614	FUNDULUS DIAPHANUS MENONA	WESTERN BANDED KILLIFISH
23	State Threatened	12.9940	MOXOSTOMA VALENCIENNESI	GREATER REDHORSE
24	State Endangered	13.0640	FUNDULUS DIAPHANUS MENONA	WESTERN BANDED KILLIFISH
25	State Threatened	13.5161	CELTIS TENUIFOLIA	DWARF HACKBERRY
26	State Endangered	13.5241	GOMPHUS EXTERNUS	PLAINS CLUBTAIL
27	State Threatened	13.5489	CELTIS TENUIFOLIA	DWARF HACKBERRY
28	State Endangered	13.6436	TOXOLASMA LIVIDUS	PURPLE LILLIPUT
29	State Threatened	13.7478	BARTRAMIA LONGICAUDA	UPLAND SANDPIPER
30	State Threatened	13.8541	BETULA PUMILA	SWAMP BIRCH
31	State Threatened	13.8861	BARTRAMIA LONGICAUDA	UPLAND SANDPIPER
32	State Threatened	13.9407	DESCURAINIA PINNATA	TANSY MUSTARD
33	Federally Threatened	13.9646	HALIAEETUS LEUCOCEPHALUS	BALD EAGLE
34	State Threatened	13.9775	ANDROSACE OCCIDENTALIS	WESTERN ROCK-JASMINE
35	State Threatened	13.9775	CONYZA RAMOSISSIMA	BUSHY HORSEWEED
36	State Endangered	14.0438	LANIUS LUDOVICIANUS	LOGGERHEAD SHRIKE
37	State Threatened	14.0554	HEDEOMA HISPIDA	ROUGH PENNYROYAL
38	State Threatened	14.1199	CELTIS TENUIFOLIA	DWARF HACKBERRY
39	State Endangered	14.4043	FUNDULUS DIAPHANUS MENONA	WESTERN BANDED KILLIFISH
40	State Threatened	14.4365	ARABIS LYRATA	LYRE-LEAVED ROCK CRESS
41	State Threatened	14.4487	CONYZA RAMOSISSIMA	BUSHY HORSEWEED
42	Federally Threatened	14.4679	HALIAEETUS LEUCOCEPHALUS	BALD EAGLE
43	State Threatened	14.5959	ELEOCHARIS COMPRESSA	FLAT-STEMMED SPIKE-RUSH
44	State Threatened	14.7414	ARABIS HIRSUTA VAR ADPRESSIPILIS	SOUTHERN HAIRY ROCK CRESS
45	State Endangered	14.8249	FUNDULUS DIAPHANUS MENONA	WESTERN BANDED KILLIFISH
